

New Solutions in Energy Utilisation

Study Report

**Energy Management Technologies
for
Towns and Municipal Quarters**

August 2000, Regensburg, Lyon, Glasgow

ENERGIE

This ENERGIE publication is one of a series highlighting the potential for innovative non-nuclear energy technologies to become widely applied and contribute superior services to the citizen. European Commission strategies aim at influencing the scientific and engineering communities, policy makers and key market actors to create, encourage, acquire and apply cleaner, more efficient and more sustainable energy solutions for their own benefit and that of our wider society.

Funded under the European Union's Fifth Framework Programme for Research, technological Development and Demonstration (RTD), ENERGIE's range of supports cover research, development, demonstration, dissemination, replication and market uptake - the full process of converting new ideas into practical solutions to real needs. Its publications, in print and electronic form, disseminate the results of actions carried out under this and previous Framework Programmes, including former JOULE-THERMIE actions. Jointly managed by Directorate-General Energy and Transport & Directorate-General Research, ENERGIE has a total budget of 1042 million over the period 1999 to 2002.

Delivery is organised principally around two Key Actions, Cleaner Energy Systems, including Renewable Energies, and Economic and Efficient Energy for a Competitive Europe, within the theme "Energy, Environment and Sustainable Development", supplemented by coordination and cooperative activities of a sectoral and cross-sectoral nature. With targets guided by the Kyoto Protocol and associated policies, ENERGIE's integrated activities are focussed on new solutions which yield direct economic and environmental benefits to the energy user, and strengthen European competitive advantage by helping to achieve a position of leadership in the energy technologies of tomorrow. The resulting balanced improvements in energy, environmental and economic performance will help to ensure a sustainable future for Europe's citizens.

ENERGIE

**with the support of the EUROPEAN COMMISSION
Directorate-General for Energy and Transport**

Energy Management Technologies for Towns and Municipal Quarters

THERMIE PROGRAMME ACTION
N°: SME-1498-97-DE

Produced by:

Zentrum für rationelle Energieanwendung
und Umwelt GmbH, Regensburg (DE)

Dipl.-rer. pol. J. Fenzl

Dipl.-Ing. Univ. K. Grepmeier

In co-operation with:

Rhonalpenergie Environnement, Lyon (FR)

Mr. J. Leroy

National Engineering Laboratory, Glasgow (UK)

Mr. A. Jenkins

TABLE OF CONTENTS

1	Glossary – Definitions and abbreviations _____	5
2	Introduction _____	6
3	Building automation and energy management - an overview _____	8
3.1	Why building automation and energy management _____	8
3.2	History of development _____	11
3.3	Application fields and functions _____	12
3.3.1	Automation and management technologies for various building types _____	13
3.3.2	Diverse functions of building automation and energy management systems _____	14
3.3.2.1	Lighting control _____	17
3.3.2.2	Control of shutters and blinds _____	18
3.3.2.3	Heating control _____	18
3.3.2.4	Ventilation control _____	19
3.3.2.5	Fault management _____	19
3.3.2.6	Occupancy check _____	19
3.3.2.7	Safety and security _____	19
3.3.2.8	Load management _____	20
3.3.2.9	Utility data tracking _____	20
3.3.2.10	Remote control and maintenance _____	21
4	State of the art energy management and automation systems _____	22
4.1	Management and automation options _____	22
4.2	System structure _____	25
4.2.1	From analogue to direct digital control _____	25
4.2.2	Hierarchical levels of functionality _____	25
4.2.2.1	Field level _____	28
4.2.2.2	Automation level _____	28
4.2.2.3	Management level _____	29
4.3	Data communication _____	30
4.3.1	ISO/OSI reference model _____	31
4.3.2	Communication protocols _____	33
4.3.3	Homogenous systems _____	33
4.3.4	Heterogeneous systems _____	34
4.3.4.1	Open communication _____	34
4.3.4.2	System integration by communication protocols _____	34
4.3.4.3	Integration options _____	36
4.3.5	Topology of communication networks _____	37
4.3.5.1	Star topology _____	37
4.3.5.2	Ring topology _____	38
4.3.5.3	Bus topology _____	39
4.3.6	Data transmission technologies _____	40
4.4	Standardisation _____	42
4.4.1	European standard for building automation and control systems _____	43
4.4.2	European communication protocol standards _____	45
4.4.2.1	Protocol standards on management level _____	46
4.4.2.2	Protocol standards on automation level _____	47
4.4.2.3	Protocol standards on field level _____	48
4.4.3	Future developments and trends _____	49
4.4.3.1	Java/Internet _____	49
4.4.3.2	Fuzzy logic _____	49
4.4.3.3	Power Line _____	50
5	Market analysis _____	51
5.1	Germany _____	51
5.1.1	Basics _____	51
5.1.2	Legal framework _____	52

5.1.2.1	Renewable Energy Law	52
5.1.2.2	Ecological tax reform	53
5.1.2.3	Energy Saving Ordinance	53
5.1.3	Overview of the building sector	54
5.1.3.1	Building structure	54
5.1.3.2	Energy consumption and emissions	57
5.1.4	Implementation schemes of building automation and energy management systems	57
5.1.4.1	New buildings	57
5.1.4.2	Existing buildings	58
5.1.4.3	Energetic characteristics	58
5.1.4.4	Implementation strategy	60
5.1.4.5	Examples of successfully applied systems - case studies	62
5.1.5	Costs and financing of building automation and energy management	66
5.1.5.1	Investment costs of systems	66
5.1.5.2	Financing schemes	68
5.1.6	Leading manufacturers and systems in use	69
5.1.7	Market potential for energy management systems	70
5.1.7.1	Housing-building societies	70
5.1.7.2	Local authorities and municipalities	73
5.1.7.3	Municipal works	74
5.1.7.4	Overview of the considered market potentials	76
5.1.8	Existing barriers for a wider introduction of building automation and energy management systems	77
5.1.8.1	Technological barriers	77
5.1.8.2	Missing standards	78
5.1.8.3	Financial barriers	78
5.1.8.4	Organisational and structural barriers	78
5.1.8.5	Lack of information and psychological barriers	79
5.1.8.6	Legal barriers	80
5.2	United Kingdom	80
5.2.1	Basics	80
5.2.1.1	Energy consumption structure	80
5.2.1.2	Liberalisation of the energy market	81
5.2.1.3	Political targets towards energy efficiency	82
5.2.2	Overview of the building sector	83
5.2.2.1	Building structure	83
5.2.2.2	Legal framework	83
5.2.2.3	Principal scope for improved energy efficiency in buildings	85
5.2.3	Building energy management systems in UK	86
5.2.3.1	Typical building energy management systems in use	87
5.2.3.2	BEMS market characteristics	87
5.2.3.3	Data communications methods	89
5.2.4	Town and municipal energy systems in UK	90
5.2.4.1	District heating systems overview	90
5.2.4.2	Technology for control of heat and power plant	91
5.2.4.3	Energy management in UK district heating	91
5.2.4.4	Scope for savings of consumption by DH end users	92
5.2.5	Integrated approach – energy management in distributed energy systems for towns and cities	93
5.2.6	Conclusions	94
5.3	France	95
5.3.1	Basics	95
5.3.1.1	General data	95
5.3.1.2	Energy consumption structure	95
5.3.1.3	Energy market and role of municipalities	97
5.3.2	Overview of the building sector	98
5.3.2.1	Building structure	98
5.3.2.2	Residential energy consumption	101
5.3.2.3	Legal framework	102
5.3.3	Implementation schemes of building automation and	

	energy management systems _____	103
5.3.3.1	Residential sector _____	103
5.3.3.2	Local authorities and municipalities _____	103
5.3.3.3	Examples of successfully applied systems – case studies _____	104
5.3.4	Costs and financing of building automation and energy management _____	109
5.3.4.1	Investment costs of systems _____	109
5.3.4.2	Financing schemes _____	110
5.3.5	Systems in use and potential _____	110
5.3.5.1	Analysis of available systems _____	110
5.3.5.2	Systems developed by the French national power and gas company _____	110
5.3.6	Existing barriers for a wider introduction of building automation and energy management systems _____	112
5.3.6.1	Human barriers _____	112
5.3.6.2	Technological barriers _____	112
5.3.6.3	Missing standards _____	113
5.3.6.4	Lack of information _____	113
5.3.6.5	Legal and financial barriers _____	113
6	European implementation strategy for BEMS _____	115
6.1	Market and potential in Europe _____	115
6.2	Barriers for a wider introduction of BEMS _____	117
6.3	Structural and organisational prerequisites _____	118
6.4	Compatibility of system components _____	121
6.5	Demand on RTD _____	121
6.6	Appropriate financing schemes _____	122
6.7	Information campaigns _____	124
6.8	Conclusions _____	125
7	Bibliography _____	126
8	Annex _____
